## **A LOOK AT DIVERSIFICATION**

Ancient Chinese merchants are said to have developed a unique way to manage their risk. They would divide their shipments among several different vessels. That way, if one ship were to sink or be attacked by pirates, the rest stood a good chance of getting through and the majority of the shipment could be saved.

Your investment portfolio may benefit from that same logic.

Diversification is an investment principle designed to manage risk. However, diversification does not guarantee against a loss. The key to diversification is to identify investments that may perform differently under various market conditions.

On one level, a diversified portfolio should be diversified between asset classes, such as stocks, bonds, and cash alternatives. On another level, a diversified portfolio also should be diversified within asset classes, such as a diverse basket of stocks.

## **A DIVERSIFIED APPROACH**

For example, say a stock portfolio included a computer company, a software developer, and an internet service provider. Although the portfolio has spread its risk among three companies, it may not be considered well diversified since all the firms are connected to the technology industry. A portfolio that includes a computer company, a drug manufacturer, and an oil service firm may be considered more diversified.

Similarly, a bond portfolio that invests exclusively in long-term U.S. Treasuries may have limited diversification. A bond fund that invests in short- and long-term U.S. Treasuries as well as a variety of corporate bonds may offer more diversification.

## MUTUAL FUNDS AND ETFs

The concept of diversification is one reason why mutual funds and Exchange Traded Funds (ETFs) are so popular among investors. Mutual funds accumulate a pool of money that is invested to pursue the objectives stated in the fund's prospectus. The fund may have a narrow objective, such as the auto sector, or it may have a broader objective, such as large-cap stocks. ETFs also can have a narrow or broader investment objective. Keep in mind, however, the more narrow an investment objective, the more limited the diversification. In addition, a narrow investment objective may result in more volatility and additional risks that are associated with a particular industry or sector.

The concept of diversification is critical to understand when you are evaluating a portfolio. If you want more information on diversification, or have questions about how your money is invested, please call so we can review your situation.

Mutual funds and exchange-traded funds are sold only by prospectus. Please consider the charges, risks, expenses, and investment objectives carefully before investing. A prospectus containing this and other information about the investment company can be obtained from your financial professional. Read it carefully before you invest or send money. Shares, when redeemed, may be worth more or less than their original cost.

There is no guarantee that a diversified portfolio will enhance overall returns or outperform a non-diversified portfolio. Diversification does not protect against market risk.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value, and may trade at prices above or below the ETF's net asset value (NAV). Upon redemption, the value of fund shares may be worth more or less than their original cost. ETFs carry additional risks such as not being diversified, possible trading halts, and index tracking errors.

Investing in mutual funds involves risk, including possible loss of principal. Fund value will fluctuate with market conditions and it may not achieve its investment objective.
